

## EMERGENCIES THAT SHOULD RECEIVE VETERINARY CARE

- Severe vomiting or diarrhea – more than 2 episodes in a 24-hour period
- Fractured bones, severe lameness or inability to move leg(s)
- Refusal to eat or drink for 24 hours or more
- Frequent coughing/gagging
- Coughing up blood, or blood in urine
- Severe bleeding
- Inability to urinate or pass feces (stool), or obvious pain associated with urinating or passing stool
- Injuries to your pet's eye(s)
- Seizures and/or staggering
- Open wounds or lacerations
- You suspect or know your pet has eaten something poisonous

**ANY concern about your pet's health warrants, at minimum, a call to your veterinarian.**

## CT SCAN

- CT Scan allows assessment of the body that is otherwise difficult, if not impossible to evaluate with traditional radiographic measures making it possible to diagnose diseases EARLIER and more ACCURATELY!
- CT images are reconstructed to give in-depth information about the bones, joints, spine, nasal cavity, chest and abdomen.
- The most common clinical indications for CT scan include
  - Nasal/sinus disease
  - Middle and inner ear disease
  - Brain tumors
  - Skull trauma
  - Musculoskeletal soft tissue tumors
  - Intervertebral disc herniation
  - Joint diseases (OCD at the shoulder, stifle, hocks, MCP of the elbow)
- Evaluation of intrathoracic mass (lung or mediastinal tumors)
- Intra-abdominal tumors (tumors of the liver, adrenal glands, urogenital tracts)
- Evaluation of angular limb deformities

## WE'RE ALWAYS HERE FOR YOU!

### COMMUNICATION WITH YOUR PRIMARY VETERINARIAN

A detailed report will be provided to your primary veterinarian should your pet be seen for emergency care or a visit with specialist at our hospital. We encourage you to follow-up with your primary veterinarian for continued care, and we work hard to communicate with them so that they can take over where we left off. Our life-saving equipment allows our experienced and compassionate team to assist your primary veterinarian with treatment day or night.
